# A surprising excursion through the astonishing world of math

Ronald Bradford

#### A Review

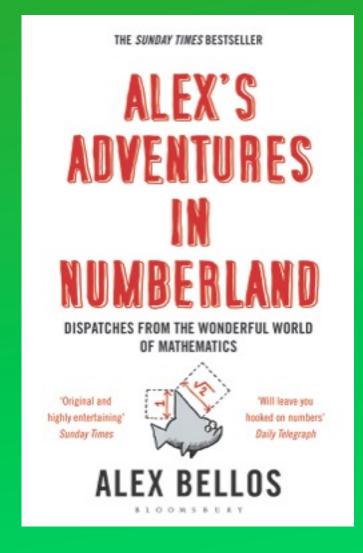

"Here's looking at Euclid" by Alex Bellos

http://www.alexbellos.com/

<- In US

Rest of the world ->

# Counting

- We use Base 10 for counting, likely for 10 physical digits
- 1,2,3,4,5,6,7,8,9,10

- Historically there was no representation for 0
  - No roman numeral for 0

# Metric System (i.e. Base 10)

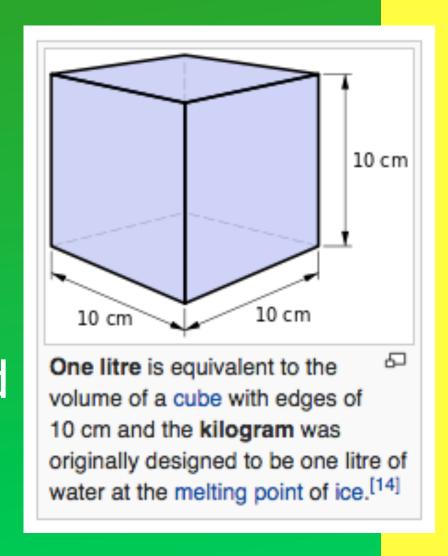

- 10x10x10 (1000) millimetres in a metre
- 1000 metres in a kilometre
- 1000 grams in a kilogram
- 1000 milliletres in a litre
- 100 degrees between water melting and boiling (0-100C)

https://en.wikipedia.org/wiki/Metric\_system

# Metric System (i.e. Base 10)

- 10x10x10 (1000) millimetres in a metre
- 1000 metres in a kilometre
- 1000 grams in a kilogram
- 1000 milliletres in a litre
- 100 degrees between water melting and

https://en.wikipedia.org/wiki/Metric\_system

# US Customary System

- 12 inches in a foot
- 3 feet in a yard
- 1760 feet in a mile
- 16 ounces in a pound
- 2000 pounds in a short ton, 2240 in a long ton
- 180 degrees between water melting and boiling (32-212)

https://en.wikipedia.org/wiki/United\_States\_customary\_units

# US Customary System

- 12 inches in a foot
- 3 feet in a yard
- 1760 feet in a mil
- 16 ounces in a pour
- 2000 pounds in a short ton, 2240 in a long ton
- 180 degrees between water melting and boiling (32-212)

https://en.wikipedia.org/wiki/United\_States\_customary\_units

#### Base 10 words

- Most Western European Languages
  - Twenty-one, Twenty-two
  - Not tenty-one, tenty-two, but Eleven, Twelve.
  - "Between 10 and 20 is a mess"
- German is even more irregular than English
- Chineses, Japanese & Korean
  - Numbers words follow a regular pattern

• More divisibility 2,3,4,6 verses 2,5

Fraction of 100	Decimal	Dozenal
One	100	100
Half	50	60
Third	33.333	40
Quarter	25	30
Fifth	20	24;97 [The semicolon is the "dozenal point."
Sixth	16.666	20
Seventh	14.285	18;6X35
Eighth	12.5	16
Ninth	11.111	14
Tenth	10	12;497
Eleventh	9.09	11;11
Twelfth	8.333	10

We have 12 months in the year

  - 5x12x12x2 (Base 12/Base 10)

- We have 12 months in the year
- We have 12 hours on a clock
  - We have 12x5 minute intervals
  - 5x12x12x2 (Base 12/Base 10)
- Phones have 12 digits

- We have 12 months in the year
- We have 12 hours on a clock
  - We have 12x5 minute intervals
  - 5x12x12x2 (Base 12/Base 10)
- Phones have 12 digits
- There are 12 eggs in a carton

- Historians interest
- The French for eighty is "quatre-vingtes"
- Which is "four-twenties"

# Base 2 / Base 16

- Our world is
  - 101010
  - 0123456789ABCEDF

# Pythagoras and squares

The triangles guy (6th century B.C.)

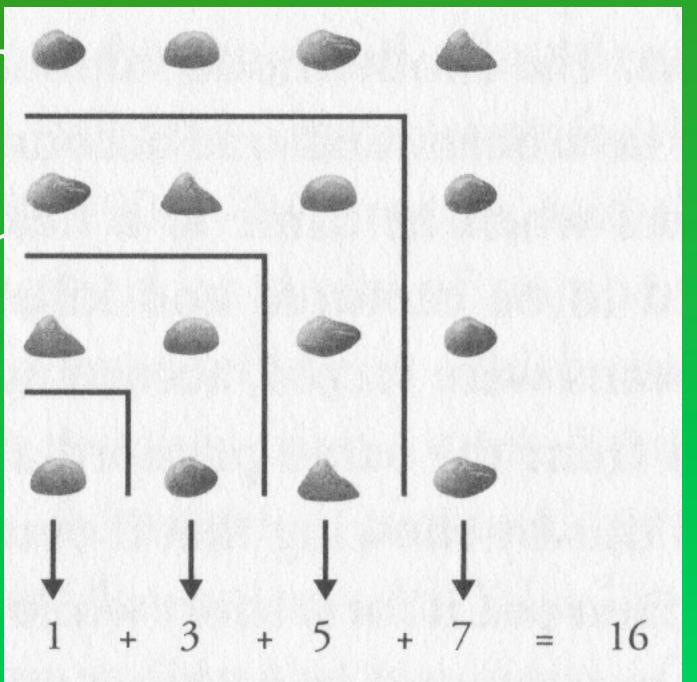

- The square of a number 'n' is the sum of the first 'n' odd numbers.
- e.g. 4x4 = 1 + 3 + 5 + 7

# Pythagoras and squares

The triangles guy (6th cer

 The square of a number 'r first 'n' odd numbers.

• e.g. 4x4 = 1 + 3 + 5 + 7

# Integer Sequences

Online Encyclopedia of Integer Sequences

http://oeis.org/

- Odd numbers <a href="http://oeis.org/A005408">http://oeis.org/A005408</a>
- Prime numbers (< 20th) <a href="http://oeis.org/A008578">http://oeis.org/A008578</a>
- Prime numbers <a href="http://oeis.org/A000040">http://oeis.org/A000040</a>
- Tribonacci numbers <a href="http://oeis.org/A000073">http://oeis.org/A000073</a>
- Happy Numbers <a href="https://oeis.org/A007770">https://oeis.org/A007770</a>

#### Error Code: 139

- 34th prime number
- twin prime with 137
- sum of 5 consecutive primes (19+23+29+31+37)
- 10th term in Euclid-Mullin sequence
- 139 is a happy number

https://en.wikipedia.org/wiki/139\_(number)

#### Error Code: 149

- 149 is the 35th prime number
- twin prime
- 149 is a emirp, because 941 is also prime
- 149 is a strong prime
- 149 is an irregular prime
- 149 is an Eisenstein prime
- 149 is a tribonacci number, being the sum of the three preceding terms, 24, 44, 81

https://en.wikipedia.org/wiki/149\_(number)

# What is prime?

- Is 1 prime?
- https://primes.utm.edu/notes/faq/one.html

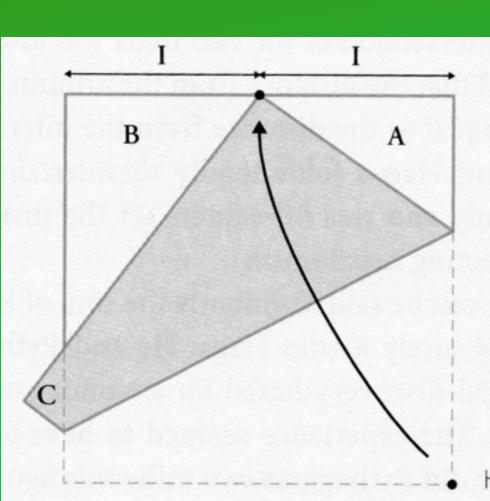

An integer *greater than one* is called a **prime number** if its only positive divisors (factors) are one and itself.

# Origami

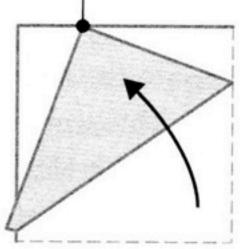

- Cutting edge of math

https://en.wikipedia.org/wiki/Mathematics\_of\_paper\_folding

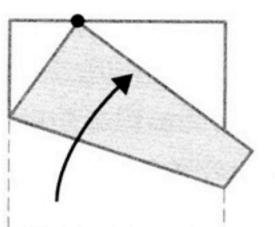

# Origami

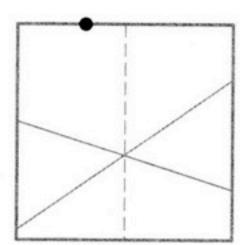

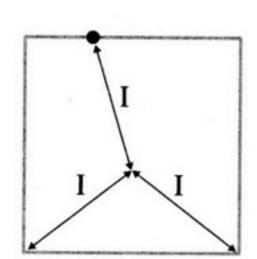

#### Arbitrary point

Haga's theorem. A, B and C are Egyptian.

# $Pi(\pi)$

$$\frac{1}{\pi} = \sum_{n=0}^{\infty} (-1)^n \times \frac{(6n)!}{(3n)! \, n!^3} \times \frac{163096908 + 6541681608n}{(262537412640768000)^{n+\frac{1}{2}}}$$

# $Pi(\pi)$

$$\frac{1}{\pi} = \sum_{n=0}^{\infty} (-1)^n \times \frac{(6n)!}{(3n)! \, n!^3} \times \frac{163096908 + 6541681608n}{(262537412640768000)^{n+\frac{1}{2}}}$$

$$\frac{1}{\pi} = \frac{2\sqrt{2}}{9801} \sum_{n=0}^{\infty} \frac{(4n)!(1103 + 26390n)}{(n!)^4 396^{4n}}$$

# Pi (π)

$$\frac{1}{\pi} = \sum_{n=0}^{\infty} (-1)^n \times \frac{(6n)!}{(3n)! \, n!^3} \times \frac{163096908 + 6541681608n}{(262537412640768000)^{n+\frac{1}{2}}}$$

$$\frac{1}{\pi} = \frac{2\sqrt{2}}{9801} \sum_{n=0}^{\infty} \frac{(4n)!(1103 + 26390n)}{(n!)^4 396^{4n}}$$

$$\frac{\pi}{4} = \frac{1}{2} + \frac{1}{5} + \frac{1}{8} - \left[ \frac{\left(\frac{1}{2}\right)^3}{3} + \frac{\left(\frac{1}{5}\right)^3}{3} + \frac{\left(\frac{1}{8}\right)^3}{3} \right] + \left[ \frac{\left(\frac{1}{2}\right)^5}{5} + \frac{\left(\frac{1}{5}\right)^5}{5} + \frac{\left(\frac{1}{8}\right)^5}{5} \right] - \dots$$

# $Pi(\pi)$

$$\frac{pi}{4} = 1 - \frac{1}{3} + \frac{1}{5} - \frac{1}{7} + \frac{1}{9} \dots$$

pi = 
$$4 - \frac{4}{3} + \frac{4}{5} - \frac{4}{7} + \frac{4}{9} \dots$$

$$4 \rightarrow 2.667 \rightarrow 3.467 \rightarrow 2.895 \rightarrow 3.340 \rightarrow \dots$$

https://en.wikipedia.org/wiki/Pi

# Are Pi digits random?

118

HERE'S LOOKING AT EUCLID

of pi with a "poker test": take five consecutive digits and consider them as if they are a poker hand.

Type of hand	<b>Actual occurrence</b>	<b>Expected occurrence</b>						
All digits different	604,976	604,800						
One pair, three different	1,007,151	1,008,000						
Two pairs	216,520	216,000						
Three of a kind	144,375	144,000						
Full house	17,891	18,000						
Four of a kind	8,887	9,000						
Five of a kind	200	200						

The right column is how many times we would expect to see the poker hands if pi was normal and each decimal place had an equal chance of being occupied by any digit. The results are well within the boundaries of what we would expect. Each pattern of numbers seems to appear with the correct frequency as it would had each decimal place been randomly generated.

# Math is everywhere in IT

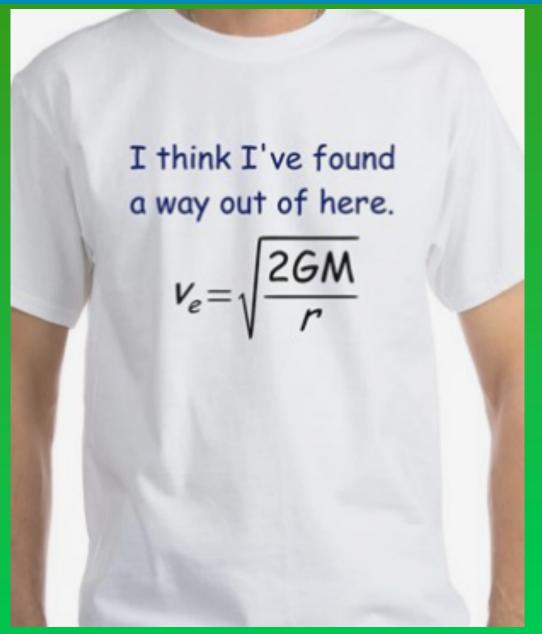

- Algorithms (e.g. sorting, Big O)
- 2D/3D Geometry (e.g. GIS)
- Cryptography (e.g. prime numbers)
- Compression
- Image processing (e.g. animation)
- Data Structures (e.g. BTree, SQL)
